

Talking Energy

Supported by FIWARE software

FINESCE is proving the practical applicability of Future Internet technologies in the energy sector. At seven trial sites across Europe working applications covering key elements of a future energy system are trialled by real people.

FINESCE is one of several use case projects working with the FIWARE architecture for a fast and cost-effective development of innovative applications and services. FIWARE is an open cloud-based service infrastructure, which offers reusable and commonly shared functions enabling an easy development of Future Internet applications and services.
